

1 Overview

This document contains important information about the package contents, supported features, known issues and limitations in this release.

This release is a consolidated release for v5.10.72. Kernel upgrade and supports SoC in the i.MX 6, i.MX 7, and i.MX 8 series boards that have been released before, and they have been full tested and the production quality is General Availability (GA) in LF5.10.35_2.0.0. They have been through automated testing to verify patches that were added after last GA release.

This document includes information for all previously released active i.MX SoCs and this can be used as context only for understanding this release. A future consolidated GA release will test and support all previously released GA i.MX SoCs listed below.

For information on changes in this release, see the manifest Readme at [index: imx-manifest.git](https://github.com/imx-manifest) and the Change Logs at [index: imx-manifest-ChangeLog.git](https://github.com/imx-manifest/ChangeLog).

NOTE

This is the final release BSP support of the i.MX 6 SABRE-AI (auto) boards and final release of the i.MX 8DualX MEK board.

i.MX reference boards

- i.MX 8 Series
 - i.MX 8ULP EVK Board
 - i.MX 8M Plus EVK Board
 - i.MX 8DXL EVK Board (Proto 1B: board revision Rev. B3, A1: silicon revision.)
 - i.MX 8QuadXPlus MEK Board
 - i.MX 8DualX MEK Board
 - i.MX 8QuadMax MEK Board
 - i.MX 8M Quad EVK Board
 - i.MX 8M Mini EVK Board
 - i.MX 8M Nano EVK Board
- i.MX 7 Series
 - i.MX 7Dual SABRE-SD Board
 - i.MX 7ULP EVKB Board
- i.MX 6 Series
 - i.MX 6QuadPlus SABRE-SD and SABRE-AI Boards

- i.MX 6Quad SABRE-SD and SABRE-AI Boards
- i.MX 6DualLite SDP SABRE-SD and SABRE-AI Boards
- i.MX 6SoloX SABRE-SD Boards
- i.MX 6UltraLite EVK Board
- i.MX 6ULL EVK Board
- i.MX 6ULZ EVK Board
- i.MX 6SLL EVK Board

NOTE

In this document, the following notation is used:

- 6SABRE-SD stands for the i.MX 6Quad, i.MX 6QuadPlus, i.MX 6DualLite, and i.MX 6DualPlus SABRE-SD Platforms.
- 6SABRE-AI stands for the i.MX 6Quad, i.MX 6QuadPlus, and i.MX 6DualLite SABRE-AI Platforms.
- 6SoloLite stands for the i.MX 6SoloLite EVK
- 6SoloX-SD stands for the i.MX 6SoloX SABRE-SD Platform.
- 6SoloX-AI stands for the i.MX 6SoloX SABRE-AI Platform.
- 7D-SABRE-SD stands for the i.MX 7Dual SABRE-SD Platform.
- 6UltraLite stands for the i.MX 6UltraLite EVK Platform.
- 6ULL stands for the i.MX 6ULL EVK Platform.
- 6ULZ stands for the i.MX 6ULZ EVK Platform.
- 7ULP stands for the i.MX 7 Ultra Low Power Platform.
- 8QuadMax stands for the i.MX 8QuadMax MEK Platform.
- 8QuadXPlus stands for the i.MX 8QuadXPlus MEK Platform.
- 8M Quad stands for the i.MX 8M Quad EVK Platform.
- 8M Mini stands for the i.MX 8M Mini EVK Platform.
- 8M Nano stands for the i.MX 8M Nano EVK Platform.
- 8MP stands for the i.MX 8M Plus EVK Platform.
- 8DXL stands for the i.MX 8DualXLite EVK Platform.
- 8ULP stands for the i.MX 8ULP EVK Platform.

The following table lists the testing that was done for each SoC.

Table 1. Board validation and support scope

| SoC | Test validation and support scope |
|---------|-----------------------------------|
| 8ULP | Beta quality. |
| 8M Plus | GA quality. |
| 8DXL | GA quality. |
| 8M Quad | GA quality. |
| 8M Nano | GA quality. |
| 8M Mini | GA quality. |

Table continues on the next page...

Table 1. Board validation and support scope (continued)

| SoC | Test validation and support scope |
|------------|-----------------------------------|
| 8QuadMax | GA quality. |
| 8QuadXPlus | GA quality. |
| 7Dual/Solo | GA quality. |
| 7ULP | GA quality. |
| 6QuadPlus | GA quality. |
| 6Quad | GA quality. |
| 6DualLite | GA quality. |
| 6SoloX | GA quality. |
| 6UltraLite | GA quality. |
| 6ULL | GA quality. |
| 6SLL | GA quality. |
| 6ULZ | GA quality. |

1.1 References

i.MX has multiple families supported in software. The following are the listed families and SoCs per family. The i.MX Linux[®] Release Notes describes which SoC is supported in the current release. Some previously released SoCs might be buildable in the current release but not validated if they are at the previous validated level.

- i.MX 6 Family: 6QuadPlus, 6Quad, 6DualLite, 6SoloX, 6SLL, 6UltraLite, 6ULL, 6ULZ
- i.MX 7 Family: 7Dual, 7ULP
- i.MX 8 Family: 8QuadMax, 8ULP
- i.MX 8M Family: 8M Plus, 8M Quad, 8M Mini, 8M Nano
- i.MX 8X Family: 8QuadXPlus, 8DXL, 8DualX

This release includes the following references and additional information.

- *i.MX Linux[®] Release Notes* (IMXLXRN) - Provides the release information.
- *i.MX Linux[®] User's Guide* (IMXLUG) - Provides the information on installing U-Boot and Linux OS and using i.MX-specific features.
- *i.MX Yocto Project User's Guide* (IMXLXYOCTOUG) - Describes the board support package for NXP development systems using Yocto Project to set up host, install tool chain, and build source code to create images.
- *i.MX Machine Learning User's Guide* (IMXMLUG) - Provides the machine learning information.
- *i.MX Linux Reference Manual* (IMXLXRM) - Provides the information on Linux drivers for i.MX.
- *i.MX Graphics User's Guide* (IMXGRAPHICUG) - Describes the graphics features.
- *i.MX Porting Guide* (IMXXBSPPG) - Provides the instructions on porting the BSP to a new board.
- *i.MX VPU Application Programming Interface Linux[®] Reference Manual* (IMXVPUAPI) - Provides the reference information on the VPU API on i.MX 6 VPU.
- *Harpoon User's Guide* (IMXHPUG) - Presents the Harpoon release for i.MX 8M device family.
- *i.MX Digital Cockpit Hardware Partitioning Enablement for i.MX 8QuadMax* (IMXDCHPE) - Provides the i.MX Digital Cockpit hardware solution for i.MX 8QuadMax.

- *i.MX DSP User's Guide* (IMXDSPUG) - Provides the information on the DSP for i.MX 8.
- *i.MX 8M Plus Camera and Display Guide* (IMX8MPCDUG) - Provides the information on the ISP Independent Sensor Interface API for the i.MX 8M Plus.

The quick start guides contain basic information on the board and setting it up. They are on the NXP website.

1.2 Release contents

This release consists of the following:

- Pre-built images
- Manufacturing tools (UUU)
- Documentation
- Git repo open source distributions on the Code Aurora i.MX Project and GitHub
- Proprietary distributions on Yocto Project i.MX external mirror
- Limited access third-party distributions

The GA releases are named L<Kernel_version>_<x.y.z>.

<Kernel_version>: BSP Kernel version (For example, L5.10.72 indicates that this BSP release is based on the kernel version 5.10.72).

<x.y.z>: Semantic versioning specification, where X is the major version, Y is the minor version, and Z is the patch version.

The following tables list the contents included in each package.

Table 2. Release contents

| Component | Description |
|------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| Linux® OS Kernel and Device Trees | 5.10.72 |
| U-Boot | v2021.04 |
| SD Card images | Prebuilt images used for testing to use on target i.MX reference boards |
| Manufacturing Tools (UUU) | Version: 1.4.165 Used to burn a production image into the board |
| i.MX Open Source repos | i.MX open source modifications or NXP original open source |
| NXP Component downloads | System Controller Porting kit and AACPlus Decoder downloadable on nxp.com |
| i.MX Proprietary on Yocto Project mirror | i.MX proprietary components for download Yocto Project mirror on nxp.com |
| i.MX Limited Access | i.MX 3rd-party packages requiring NXP marketing assistance |

The release packages contain the following.

- Documentation.
- Prebuilt binaries:
 - SD Card prebuilt image for the release target SoC.
 - Kernel and Device trees
 - Boot Images
 - Applicable Arm® Cortex®-M4 Demos if applicable to target SoC
- UUU default scripts that burn into eMMC. UUU example scripts are used as reference.

See the *i.MX Linux User's Guide* (IMXLUG) for information on how to use these release contents.

The following packages are available on the NXP Yocto Project mirror. Each package is pulled into builds directly when doing a Yocto Project build but can also be retrieved using the following command on the Linux OS.

```
wget https://www.nxp.com/lgfiles/NMG/MAD/YOCTO/<package file name>
```

Table 3. BSP and multimedia standard packages

| File name | Description |
|-----------------------------------|----------------------------------------------------------------------------------------|
| imx-codec-4.6.3.bin | i.MX optimized Audio and Video core codec libraries |
| imx-parser-4.6.3.bin | i.MX optimized core parser |
| imx-vpu-5.4.39.3.bin | i.MX VPU library for i.MX 6 with VPU |
| imx-vpu-hantro-1.24.0.bin | i.MX VPU Hantro libraries for i.MX 8M Quad, 8M Mini, and 8M Plus |
| imx-vpu-hantro-vc-1.6.0.bin | i.MX VPU Hantro vc8000e Encoder libraries for i.MX 8M Plus |
| firmware-imx-8.14.bin | i.MX Firmware including firmware for VPU, DDR, EPDC, HDMI, DP (Display Port), and SDMA |
| imx-seco-3.8.4.bin | i.MX SECO firmware for i.MX 8QuadMax, 8QuadXPlus, 8DX, and 8DXL reference boards |
| imx-gpu-viv6.4.3.p2.4-aarch32.bin | i.MX Graphics libraries for i.MX 6 and 7 SoC with GPU |

Table continues on the next page...

Table 3. BSP and multimedia standard packages (continued)

| File name | Description |
|------------------------------------|----------------------------------------------------------------------------------------------|
| imx-gpu-viv-6.4.3.p2.4-aarch64.bin | i.MX Graphics libraries for i.MX 8 |
| imx-gpu-g2d-6.4.3.p2.4.bin | i.MX Graphics G2D libraries for i.MX 6 and 7 with GPU |
| imx-dpu-g2d-6.4.3.p2.4.bin | i.MX Graphics G2D libraries for i.MX 8 |
| imx-sc-firmware-1.11.0.bin | i.MX System Controller Firmware for i.MX 8QuadMax, 8QuadXPlus, 8DX and 8DXL reference boards |
| ml-security-1.0.5.bin | Machine Learning Security |
| imx7d-sabresd-m4-freertos-1.0.bin | i.MX 7D Cortex-M4 Demo |
| imx7ulp-m4-demo-2.10.0.bin | i.MX 7ULP Cortex-M4 Demo |
| imx8qm-m4-demo-2.9.0.bin | i.MX 8QuadMax Cortex-M4 Demo |
| imx8qx-m4-demo-2.9.01.bin | i.MX 8QuadXPlus Cortex-M4 Demo |
| imx8mq-m4-demo-2.9.0.bin | i.MX 8M Quad Cortex-M4 Demo |
| mx8mm-m4-demo-2.10.0.bin | i.MX 8M Mini Cortex-M4 Demo |
| mx8mn-m7-demo-2.10.0.bin | i.MX 8M Nano Cortex-M7 Demo |
| imx8dxi-m4-demos-2.9.0.bin | i.MX 8DXL Cortex-M4 Demo |
| mx8mp-m7-demo-2.10.0.bin | i.MX 8M Plus Cortex-M7 Demo |
| mx8ulp-m33-demo-2.11.0.bin | i.MX 8ULP Cortex-M33 Demo |

NOTE

The Cortex-M MCUXpresso SDK is distributed by the MCUXpresso Web Builder tool. To obtain the MCUXpresso SDK for the Cortex-M core of your i.MX SoC, visit <http://mcuxpresso.nxp.com>.

The following packages are available for download on nxp.com.

Table 4. NXP.com packages

| File name | Description |
|------------------------------------|----------------------------------------|
| imx-aacpcodec-4.6.3.bin | Coding Technologies AACplus decoder |
| imx-scfw-porting-kit-1.11.0.tar.gz | System Controller Firmware porting kit |

i.MX BSP also releases open source through repos on the Code Aurora Forum (CAF) [i.MX CAF Project and GitHub](#). The following table lists all the repos on CAF and GitHub.

Table 5. i.MX Code Aurora Forum and GitHub Distributed Repos

| Repo | Description |
|------------------------------|---------------------------------------|
| imx-manifest | i.MX Yocto Project Linux BSP Manifest |
| linux-imx | i.MX Linux Kernel |
| uboot-imx | i.MX U-Boot |
| imx-atf | i.MX Arm Trusted Firmware for i.MX 8 |

Table continues on the next page...

Table 5. i.MX Code Aurora Forum and GitHub Distributed Repos (continued)

| Repo | Description |
|----------------------------------------|-------------------------------------------------------|
| imx-mkimage | i.MX Mkimage boot image tool |
| imx-lib | i.MX Libraries |
| imx-test | i.MX Driver unit test applications |
| imx-optee-os | i.MX OP-TEE OS |
| imx-optee-test | i.MX OP-TEE Test |
| imx-optee-client | i.MX OP-TEE Client |
| imx-xen | i.MX Xen hypervisor |
| imx-gst1.0-plugin | i.MX Multimedia GStreamer Plugins |
| gst-plugins-base | i.MX Multimedia GStreamer Base |
| gst-plugins-bad | i.MX Multimedia GStreamer Bad |
| gst-plugins-good | i.MX Multimedia GStreamer Good |
| gstreamer | i.MX Multimedia GStreamer Core |
| imx-alsa-plugins | i.MX ALSA Plugins |
| libdrm-imx | i.MX Graphics DRM |
| opencv-imx | i.MX Graphics OpenCV |
| weston-imx | i.MX Graphics Weston |
| wayland-protocols-imx | i.MX Graphics Wayland Protocols |
| xf86-video-imx-vivante | i.MX Graphics X.org Vivante Driver |
| meta-imx | i.MX Yocto Project Release Layer |
| armnn-imx | i.MX ArmNN Fork |
| onnxruntime-imx | i.MX Onnxruntime Fork |
| nn-imx | i.MX NN Fork |
| mwifiex | NXP Wi-Fi kernel driver |
| gtec-demo-framework | i.MX Graphics Demo Framework on NXPMicro GitHub |
| imx-firmware | i.MX Firmware for Cypress and NXP Wi-Fi and Bluetooth |
| imx-seco-libs | i.MX SECO libraries |
| imx-vpuwrap | i.MX VPU Wrapper |
| arm-computelibrary-imx | Arm compute library |
| pyarmnn-release | PyArmNN |
| tensorflow-imx | TensorFlow |
| v2xseshm | V2XSE SHM library |
| vtest | V2X test application |

Table continues on the next page...

Table 5. i.MX Code Aurora Forum and GitHub Distributed Repos (continued)

| Repo | Description |
|---------------------|---------------------|
| sof | Sound Open Firmware |

An additional part of the release are Yocto Project demos that show additional use cases on different i.MX hardware. These demos are layers that work on top of a public BSP release. These are listed below and are updated within a month of each consolidated GA release. These demos are not fully tested but show how to integrate different stacks of software to use with i.MX reference boards and our BSP release.

- `meta-edgescala`: EdgeScale demos for i.MX and QorIQ.
- `meta-imx-iotedge`: Azure IoT Edge demo.
- `meta-imx-edgescala`: EdgeScale demos for i.MX 8 M Quad.
- `meta-imx-gpu-sdk`: Additional graphics demos for i.MX 8.
- `meta-imx-iot-gateway`: AWS and IOT Gateway demos for i.MX 6UL/6ULL.
- `meta-nxp-agl`: Automotive Grade Linux for i.MX 6 and i.MX 8 Auto boards. Note that AGL is not supported on hardknott.
- `meta-nxp-genivi`: GENIVI demo for i.MX 6 and i.MX 8 auto boards.
- `OTA`: Note no extra layer. Contact Mender to integrate the 3rd-party Mender OTA solution.

1.3 License

The Board Support Package (BSP) is composed of a set of packages and metadata (for Yocto Project Recipes) and each one has its own licensing. Verify the license of the target package before developing. The license can be found at the top of a recipe or a source file (such as *.c or *.h). For details, contact your NXP representative.

During the Yocto Project setup, to set up an i.MX build, accept the NXP license. This acceptance is recorded in the build configuration files so that the following proprietary binaries can be extracted during the build process. The NXP proprietary packages contain a Software Content Register (SCR) file that lists information about the package: `imx-gpu-viv`, `imx-codec`, and `imx-parser`.

1.4 Limited access proprietary packages

Limited access packages listed in the following table are provided on [nxp.com](#) with controlled access because they require additional licensing by a 3rd party. Contact your sales representative for access. Each package has its own Readme file with instructions on how to build, install, and run.

Table 6. Limited access packages for Yocto project releases

| Package | Description |
|-------------------------------------------|--------------------------------------------------|
| <code>imx-mscodec-4.6.3.bin</code> | i.MX optimized Microsoft codec |
| <code>imx-msparser-4.6.3.bin</code> | i.MX optimized Microsoft ASF parser |
| <code>imx-real-4.6.3.bin</code> | i.MX Real Networks RMVB Decoders and Parsers |
| <code>imx-dsp-1.2.0.bin</code> | DSP firmware |
| <code>imx-dsp-codec-1.2.0.bin</code> | DSP decoders (MP2, MP3, BSAC, DRM, DABPlus, SBC) |
| <code>imx-dsp-codec-ext-1.2.0.bin</code> | DSP extra codecs |
| <code>imx-dsp-codec-aacp-1.2.0.bin</code> | DSP AACPlus decoder |

2 What's New?

This section describes the changes in this release, including new features and defect fixes.

2.1 New features

A summary of the main new features is as follows.

New features added for all supported boards:

- Upgraded the kernel to 5.10.72 with consolidated Linux Factory Kernel.
- Upgraded the U-Boot to v2021.04 with consolidated Linux Factory U-Boot.
- Updated EULA to v30 October 2021.
- Upgraded the Yocto Project to version 3.3 Hardknott with new meta-cockpit layer.
- Supports the GCC 10.2 toolchain.
- Cortex-M33 update for 8ULP, Cortex-M7 updates for i.MX 7ULP, i.MX 8M Nano, i.MX 8M Plus, and Cortex-M4 update for i.MX 8M Mini.
- Security
 - OpenSSL updated to 1.1.1l.
 - OP-TEE upgraded to 3.15.0.
 - Arm Trusted Firmware updated with consolidated Linux Factory release.
 - Fixed Potential Vulnerability Discovered in Arm Trusted Firmware (domain ID is not bounded in the `imx_gpc_pm_domain_enable` function).
- Multimedia updates:
 - Supports Hantro VPU V4L2 codec interfaces, used in Gstreamer by default.
 - Upgraded Sound Open Firmware to v1.9.
 - Audio Front-End Software nxp-afe introduced.
- Graphics updates:
 - GPU driver upgraded to 6.4.3.p2.4 with vulkan enablement, bug fixes, and performance optimizations.
 - GPU SDK upgraded to 5.7.1.
 - Chromium upgraded to 91.0.4472.114.
- Machine Learning updates:
 - OpenCV upgraded to 4.5.2.
 - Tensorflow-lite upgraded to 2.6.0 with GPU acceleration.
 - Arm NN upgraded to 21.08 with GPU acceleration with a fork on CAF.
 - Onnxruntime upgrade to 1.8.2.
 - nn-imx, which was upgraded to 1.2.0, is separated from graphics distribution and released on CAF (version 1.1.7).
- i.MX 8ULP
 - Introduction for 8ULP as Beta quality.
- i.MX 8M Plus
 - Updates for ISP 4.2.2.16.
- i.MX 8DXL
 - Updates for V2X library and V2X test application.

- NXP Wi-Fi driver enhancement
 - SD8801 chipset support with SDIO host interface.
- Arm SystemReady-IR (SR-IR) certification
 - i.MX 8M Mini EVK board has passed the Arm SR-IR certification.
 - i.MX 8M Plus EVK board has passed the Arm SR-IR certification.
 - i.MX 8M Quad EVK board has passed the Arm SR-IR certification.
 - i.MX 8M Nano EVK board has passed the Arm SR-IR certification.
- Userspace Ethernet DPDK Driver
 - Supported on i.MX 8M Mini
 - DPDK I2fwd and I3fwd applications supported

3 SoC Feature Summary

The following table describes the SoC features summarized into groups.

Table 7. SoC hardware acceleration features

| Feature | SoC |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2D Graphics with GPU | i.MX 6 Family: 6Quad, 6DualLite, 6Solo, 6SoloX i.MX 7 Family: 7ULP i.MX 8M Family: 8M Mini, 8M Plus |
| 3D GPU | i.MX 6 Family: 6Quad, 6DualLite, 6Solo, 6SoloX i.MX 7 Family: 7ULP i.MX 8 Family: 8QuadMax, 8ULP i.MX 8X Family: 8QuadXPlus i.MX 8M Family: 8M Quad, 8M Mini, 8M Nano, 8M Plus |
| 2D Graphics with DPU | i.MX 8 Family: 8QuadMax i.MX 8X Family: 8QuadXPlus |
| Vulkan GPU | i.MX 8 Family: 8QuadMax, 8ULP i.MX 8X Family: 8QuadXPlus i.MX 8M Family: 8M Plus |
| OpenVX | i.MX 8 Family: 8QuadMax |
| VPU | i.MX 6 Family: 6Quad, 6DualLite, 6QuadPlus i.MX 8 Family: 8QuadMax i.MX 8X Family: 8QuadXPlus i.MX 8M Family: 8M Quad, 8M Mini, 8M Plus |
| EPDC | i.MX 6 Family: 6DualLite, 6SLL, 6ULL, 6ULZ |

Table continues on the next page...

Table 7. SoC hardware acceleration features (continued)

| Feature | SoC |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | i.MX 7 Family: 7Dual i.MX 8 Family: 8ULP |
| PXP | i.MX 6 Family: 6DualLite, 6SLL, 6UL, 6ULL, 6ULZ i.MX 7 Family: 7Dual i.MX 8 Family: 8ULP |
| Frame Buffer Display | i.MX 6 Family: 6Quad, 6DualLite, 6Solo, 6SoloX, 6SLL, 6UL, 6ULL, 6ULZ i.MX 7 Family: 7Dual, 7ULP |
| DRM Display | i.MX 8 Family: 8QuadMax, 8ULP i.MX 8X Family: 8QuadXPlus, 8DualX i.MX 8M Family: 8M Quad, 8M Mini, 8M Nano, 8M Plus, 8ULP |
| M Core Boot | i.MX 6 Family: 6SoloX i.MX 7 Family: 7Dual, 7ULP i.MX 8 Family: 8QuadMax i.MX 8X Family: 8QuadXPlus, 8DX, 8DXL i.MX 8M Family: 8M Quad, 8M Mini, 8M Nano 8M Plus |
| HiFi4 DSP | i.MX 8 Family: 8QuadMax, 8ULP i.MX 8X Family: 8QuadXPlus, 8DualX i.MX 8M Family: 8M Plus |
| NXP eIQ Machine Learning | i.MX 8 Family: 8QuadMax, 8ULP i.MX 8X Family: 8QuadXPlus, 8DualX i.MX 8M Family: 8M Quad, 8M Mini, 8M Nano, 8M Plus |

4 BSP Supported Features

The following table describes the features that are supported in this BSP release. In this table, if no board is explicitly stated, the feature is shared across all boards listed in Section [Overview](#). Otherwise, the feature is only supported on the boards listed.

Table 8. Supported features

| Feature | Supported board | Comment |
|---------------|-----------------|-------------------------------------------------------------------------------------------------------|
| Kernel | | |
| Kernel | All i.MX | Kernel version: 5.10.72 |
| File System | All i.MX | EXT2/EXT3/EXT4 are used as the file system in MMC/eMMC/SD card. On i.MX 6SABRE-AI and 7D-SABRE-SD, |

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|-------------------------------|-----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OP-TEE | All i.MX 6 All i.MX 7 All i.MX 8M | OP-TEE OS is required on the boot partition with the TEE file for OP-TEE enablement. |
| Xen Hypervisor | 8QuadMax 8QuadXPlus | Xen is a Type 1 hypervisor and goes into the boot image. Look for dom0-related device trees. |
| Jailhouse Hypervisor | All i.MX 8M 8QuadMax 8QuadXPlus 8ULP | Jailhouse is a Type 1 hypervisor for i.MX 8. Look for related device trees for inmate and root device trees. |
| Machine-specific layer | | |
| Arm® Core | All i.MX | <p>i.MX 6 SABRE-SD, 6 SABRE-AI, 6SLL, and 6 SoloX-SD support the Arm Cortex-A9 processor.</p> <p>i.MX 7Dual SABRE-SD and 7ULP EVK support the Arm Cortex-A7 and Cortex-M processor.</p> <p>i.MX 6UltraLite EVK, 6ULL EVK, and 6ULZ EVK support the Arm Cortex-A7 processor.</p> <p>i.MX 8QuadXPlus processor consists of five cores:</p> <ul style="list-style-type: none"> • Four Arm Cortex-A35 • One Arm Cortex-M4F <p>i.MX 8QuadMax processor consists of eight cores:</p> <ul style="list-style-type: none"> • Four Arm Cortex-A53 cores • Two Arm Cortex-A72 cores • Two Arm Cortex-M4F cores <p>i.MX 8M Quad and i.MX 8M Mini support four Arm Cortex-A53 cores and one Arm Cortex-M4 core.</p> <p>i.MX 8M Nano supports four Arm Cortex-A53 cores and one Arm Cortex-M7F core.</p> <p>i.MX 8M Plus support four Arm Cortex-A53 cores and one Arm Cortex-M7F core.</p> <p>i.MX 8DXL supports two Arm Cortex-A35 cores and one Arm Cortex-M4F core.</p> |
| Memory | All i.MX | <p>On i.MX 6 and i.MX 7 SoC, the user/kernel space is split 2G/2G.</p> <p>On i.MX 8 with 64-bit configuration, the memory is not split.</p> <p>i.MX 8QuadMax supports two 32-bit LPDDR4 channels @1600 MHz.</p> <p>i.MX 8QuadXPlus supports one 32-bit LPDDR4 channel @1200 MHz.</p> <p>i.MX 8DXL supports one 32-bit LPDDR4 channel @ 1200 MHz.</p> <p>i.MX 8M Quad supports one 32-bit LPDDR4 channel @ 1600 MHz and 50 MHz.</p> |

Table continues on the next page...

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|---------------------------------|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | i.MX 8M Mini supports one 32-bit LPDDR4 channel @ 1500 MHz and 50 MHz. i.MX 8M Nano supports one 16-bit LPDDR4 channel @ 750 MHz and 25 MHz. i.MX 8M Plus supports one 32-bit LPDDR4 channel @ 2000 MHz and 50 MHz. |
| Interrupt | All i.MX | GIC |
| Clock | All i.MX | Controls the system frequency and clock tree distribution. |
| Timer | All i.MX | System timer tick and broadcast timer support. GPT Timer used for i.MX 6 and i.MX 7. On i.MX 8M SoC and 8QuadXPlus, system counter timer instead of GPT. On i.MX 8, Arm Arch timer used instead of GPT. On i.MX 6 and i.MX 7 Enhanced Periodic Interrupt Timer (EPIT) available. |
| GPIO/EDIO | All i.MX | GPIO is initialized in earlier phase according to hardware design. |
| IOMUX | All i.MX | Provides the interfaces for I/O configuration. IOMUX-V3 version is used on i.MX 6, i.MX 7, and i.MX 8M boards. For i.MX 8QuadMax and 8QuadXPlus the system controller manages access to the IOMUX. |
| System Controller | 8QuadMax 8QuadXPlus 8DXL | Provides abstraction to the hardware features and runs on Arm Cortex executing firmware. |
| DMA engine | | |
| SDMA | All i.MX 6 All i.MX 7 All i.MX 8M | Conforms to the DMA engine framework. |
| APBH-Bridge-DMA | 6SABRE-AI | Conforms to the DMA engine framework. This feature requires a NAND U-Boot. |
| Character device drivers | | |
| UART | All i.MX | i.MX 6 SABRE-SD supports console through internal Debug UART1. i.MX 6SoloX SABRE-SD supports Cortex-A9 processor through UART1 and Cortex-M4 processor through UART2. i.MX 7Dual SABRE-SD supports Cortex-A7 processor through UART1 and Cortex-M4 processor through UART2. i.MX 6UltraLite, 6ULL, and 6ULZ EVK boards support Cortex-A7 processor through UART1. i.MX 6 SABRE-AI supports console through internal Debug UART 4. i.MX 7ULP EVK supports through LPUART. There are two LPUARTs on the i.MX 7ULP EVK board. LPUART0 is connected to Arm Cortex-M4 domain and LPUART4 to Arm Cortex-A7 domain. |

Table continues on the next page...

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|---------------------------------|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>i.MX 8M Mini EVK supports CA53 through UART2 and Cortex-M4 through UART4.</p> <p>i.MX 8M Quad supports Cortex-A53 processor through UART1 and Cortex-M4 processor through UART2.</p> <p>i.MX 8QuadMax and 8QuasXPlus use LPUART.</p> <p>i.MX 8QuadMax and 8QuasXPlus support Cortex-A53 processor through UART0 and Cortex-M4 processor through UART2.</p> <p>i.MX 8M Nano supports Cortex-A53 through UART2 and Cortex-M7 through UART4.</p> <p>i.MX 8M Plus supports Cortex-A53 through UART2 and Cortex-M7 through UART4.</p> <p>i.MX 8DXL supports Cortex-A35 through UART0 and Cortex-M4 through M40_UART0.</p> <p>i.MX 8ULP supports Cortex-A35 through LPUART5.</p> |
| Power Management drivers | | |
| Anatop Regulator | All i.MX 6 All i.MX 7 | Supports Anatop regulator management. |
| Lower Power mode | All i.MX 6 All i.MX 7 All i.MX 8M | Supports standby mode and dormant (mem) mode on i.MX 6 and i.MX 7 boards. |
| CPUIdle | All i.MX 6 All i.MX 7 | 2-level CPUIdle supported: purely WFI and WFI with wait mode enabled. |
| CPUFreq | All i.MX | CPUFreq can be used for CPU frequency adjustment. The Interactive governor is added and enabled by default. |
| BusFreq | All i.MX 6 7D-SABRE-SD All i.MX 8M | Supports the system bus clock frequency scaling. |
| Battery charging | All i.MX 6 All i.MX 7 All 8M | Supports battery charge type detection. |
| Networking drivers | | |
| ENET | All i.MX 6 7D-SABRE-SD All i.MX 8 | <p>i.MX 6Quad/SoloX board supports AR8031 PHY, i.MX 6UltraLite EVK board supports KSZ8081 PHY, and i.MX 7Dual SABRE-SD board supports BCM54220 PHY.</p> <p>i.MX 6SoloX SABRE-SD, SABRE-AI, and i.MX 7Dual SABRE-SD support AVB features.</p> <p>i.MX 8 supports Atheros AR8031 PHY with 10/100/1000 bps mode, NXP automotive PHY TJA1100 PHY, and AVB features.</p> |

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|-------------------------------------|----------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EQOS_TSN | i.MX 8M Plus i.MX 8DXL | i.MX 8DXL supports AR8031 PHY, i.MX 8M Plus supports RTL8211FDI. Supports Ethernet TSN features. |
| IEEE [®] 1588 | All i.MX 6 All i.MX 7 All i.MX 8 | Supports Linux PTP stack. Supports IPv4, IPv6, and IEEE 802.3 transport. Supports E2E, and P2P transparent clock. Supports IEEE802.1AS-2011 in the role of end station. |
| PCIe | All i.MX except for 8M Nano, 6SLL, 6UL, 6ULL, and 6ULZ | With the platform that supports PCIe module. For i.MX 6 and 7, the default kernel configuration does not enable PCIe. The i.MX 8 defconfig does enable PCIe. For EP/RC validation on i.MX 8, use a converter cable that converts from standard PCIe interface to M.2. <ul style="list-style-type: none"> • EP can be initialized/enumerated by RC. • EP can access the memory of RC. • RC can access the memory of EP. • EP can trigger MSI, and the triggered MSI can be captured by RC. |
| MediaLB | 6SABRE-AI 8QuadXPlus | On i.MX 6SABRE-AI, CPU1 supports MLB 150 and MLB 25/50. On i.MX 6SABRE-AI, CPU2 and i.MX 6QuadPlus SABRE-AI support MLB 25/50 only. |
| FlexCAN | All i.MX 6 7D-SABRE-SD 8QuadMax 8QuadXPlus 8M Plus | Supports one CAN with the default device tree on i.MX 6SABRE-AI. Supports both CANs using the FlexCAN device tree but has a pin conflict with FEC. Supports with the default device tree on i.MX 6SoloX-SD, 7Dual SABRE-SD, 6Ultralite EVK, and 6ULL EVK. With the platform that supports the FlexCAN module, FlexCAN supports CANFD mode. |
| Wi-Fi/Bluetooth wireless technology | All i.MX | Supports the NXP SDIO 88W8801 (tested with Murata LBWA0ZZ2DS on i.MX 8M Quad, and Murata LBWA0ZZ2DS with Murata M.2-to-usd adapter on i.MX 6ULL). Supports the NXP SDIO IW416 (tested with Murata LBEE5CJ1XK on i.MX 8M Quad and i.MX 8ULP, and Murata LBEE5CJ1XK with Murata M.2-to-usd adapter on i.MX 6ULL). Supports the NXP SDIO 88W8997 (tested with AzureWav AW-CM276MA-SUR) on i.MX 8M Plus and i.MX 8M Quad. Supports the NXP PCIe 88W9098 (tested with Murata LBEE6ZZ-1TA) on i.MX 8M Plus, i.MX 8M Quad, i.MX 8QuadMax, i.MX 8QuadXPlus, and i.MX 8DXL. Supports the NXP PCIe 88W8997 Wi-Fi/Bluetooth SoC (tested with Azurewave AW-CM276MA-PUR) on i.MX 8QuadMax, i.MX 8QuadXPlus, i.MX 8M Quad, i.MX 8DXL, and i.MX 8M Plus. |

Table continues on the next page...

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|--------------------------------------|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>Supports the NXP SDIO 88W8987 Wi-Fi/Bluetooth SoC (tested with Azurewave AW-CM358-uSD) on i.MX 6, i.MX 7Dual, i.MX 7ULP, i.MX 8M Mini LPDDR4 EVK, and i.MX 8M Nano LPDDR4 EVK.</p> <p>All the i.MX 6 boards require board modifications to support Bluetooth and to boot with the Wi-Fi/Bluetooth device tree.</p> <p>For Bluetooth A2DP, if the Yocto Project has no frame buffer, for example, the 6UltraLite G1 part chip has no LCDIF, run PulseAudio manually with the command:</p> <pre>/usr/bin/pulseaudio --start --log-target=syslog</pre> |
| DPDK | 8M Mini | <p>Userspace Ethernet FEC Driver</p> <ul style="list-style-type: none"> • DPDK version 20.11 • l2fwd and l3fwd applications supported in loopback mode <p>For details on executing l2fwd and l3fwd applications, see the <code>dpdk/nxp/README</code> file.</p> |
| Security drivers | | |
| CAAM | All i.MX | Cryptographic Acceleration and Assurance Module. |
| SNVS | All i.MX 6 All i.MX 7 All i.MX 8M | Secure Non-Volatile Storage. |
| SIMv2 | 6UltraLite 7D-SABRE-SD | Smart Card Interface. |
| EMVSIM | 8QuadMax | Smart Card Interface. |
| Sound drivers and DSP | | |
| DSP | 8QuadXPlus 8QuadMax 8M Plus 8ULP | One HiFi 4 DSP |
| AK5558 AK4497 AK4458 AK5552 | All i.MX 8M | Supported on Audio board but AK4497 and AK4458 on current audio board cannot work for i.MX 8M Nano. |
| WM8524 WM8960 SAI | All i.MX 8M | Supports playback. |

Table continues on the next page...

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|--------------------------|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WM8962/SSI WM8960/SSI | 6SABRE-SD 6SoloX-SD 7D-SABRE-SD 6UltraLite 6ULL 6ULZ 6SLL 7ULP | Supports playback. |
| SAI/MQS | 8QuadMax | Supports playback. |
| S/PDIF | 6SABRE-SD 6SABRE-AI 8QuadMax 8QuadXPlus All i.MX 8M | Supports 16 bit and 24 bit stereo playback from 32 kHz to 48 kHz sample rate. Supports 24 bit stereo record from 16 kHz to 96 kHz. |
| ASRC | 6SABRE-AI 6SoloX-SD 6UltraLite 6ULL 6ULZ 8QuadMax 8QuadXPlus 8M Nano 8M Plus | Supports sample rates conversion from 5 kHz to 192 kHz and output sample rates from 32 kHz to 192 kHz. Supports ALSA plug-in library playback. |
| ESAI/CS42888 | 6SABRE-AI 8QuadMax 8QuadXPlus | Supports 16 bit, 24 bit PCM format, channel from 2 to 6, and sample rate from 8 kHz to 192 kHz for playback with ASRC P2P. Supports sample rate from 8 kHz to 96 kHz for record and playback without ASRC. Supports 4 channels input and 8 channels output. Supports full duplex operations. Supports amixer alsamixer control from user space. |
| SAI/MQS/WM8962 | 6SoloX-SD 7D-SABRE-SD 6UltraLite | Supports 16 bit, 24 bit, and 32 bit PCM format. Supports sample rate from 8 kHz to 96 kHz for record and playback. Supports full duplex operations. |

Table continues on the next page...

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|-----------------------------|------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | 6ULL 6ULZ 7ULP All i.MX 8M 8QuadMax 8QuadXPlus | Supports amixer alsamixer control from user space. Supports clock control. Supports MQS only on i.MX 6 and i.MX 7. Supports WM8962 only on i.MX 8QuadMax. |
| AMIX | 8QuadMax 8QuadXPlus | Supports 16 bit, 18 bit, 20 bit, 24 bit, and 32 bit PCM format. Supports sample rate from 8 kHz to 96 kHz for record and playback. Supports amixer alsamixer control from user space. |
| HDMI Audio | 6SABRE-SD 6SABRE-AI 7ULP 8QuadMax 8M Quad 8M Plus | For i.MX 8QuadMax, it is not supported on the reference board but is able to add to the custom board. i.MX 8M Quad supports audio playback through HDMI. |
| eARC | 8M Plus | i.MX 8M Plus supports audio receive from eARC. |
| Input device drivers | | |
| USB devices | All i.MX | Supports USB mouse and USB keypad through USB ports. |
| Touch panel | All i.MX | 6SABRE-SD and 6SABRE-AI support EGalaxy capacitive touch screen. 7Dual SABRE-SD supports E Ink touch screen with a separate package download. 6SoloX SABRE-SD supports LVDS panel. 7ULP EVK supports touch through DSI panel |
| Keypad | 6UltraLite 7D-SABRE-SD 7ULP | Supports the resistive touch panel. |
| Storage drivers | | |
| FlexSPI-NOR | 6SoloX-SD 6UltraLite 6ULL 6ULZ 7D-SABRE-SD | i.MX 6SoloX SABRE-SD supports QSPI2. i.MX 6UltraLite EVK supports QSPI1. i.MX 7Dual SABRE-SD supports QSPI1. i.MX 8QuadXPlus, 8M Quad, 8M Mini, and 8M Plus support FlexSPI1. i.MX 8M Mini supports NOR Flash Boot. |

Table continues on the next page...

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|-----------------------------------|-------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | All i.MX 8 | |
| SPI-NOR | 6SABRE-AI | Supports M25P32. On i.MX 6SABRE-SD Dual/Quad/DualLite, there is a pin conflict for supporting SPI-NOR. |
| NAND | 6SABRE-AI 7D-SABRE-SD 8QuadXPlus 8M Quad 8M Mini | Normal NAND and ONFI NAND asynchronous mode with BCH40/BCH62. |
| Parallel NOR | 6SABRE-AI 8QuadMax | Supports Parallel NOR by using the EIM interface on i.MX 6 SABRE-AI. |
| SATA | 6SABRE-SD 6SABRE-AI 8QuadMax | i.MX 6DualQuad SABRE-SD and SABRE-AI, i.MX 6 QuadPlus SABRE_SD and SABRE-AI support Serial ATA 2.0. i.MX 8QuadMax supports SATA III (6.0 GB/s). |
| USB drivers | | |
| USB Host | All i.MX | Supports USB HOST1 and USB OTG host. |
| USB Device | All i.MX | Supports USB OTG device mode. |
| USB | All i.MX | Supports USB OTG 2.0, USB Host 2.0 for all i.MX except 8M Plus. All i.MX 8 and i.MX 7ULP EVK boards support Type-C ports. The boards that support USB 3.0 are i.MX 8QuadMax and 8QuadXPlus MEK boards, and 8M Quad and 8M Plus EVK boards. USB Host mode: MSC, HID, UVC, and USB audio. USB device mode: MSC, Ethernet, and Serial. USB OTG pin detect support for Dual-role switch at USB2. |
| Graphics and Video drivers | | |
| GPU | 6SABRE-SD 6SABRE-AI 7ULP All i.MX 8M 8QuadXPlus 8QuadMax | Graphics Chips Details: See <i>i.MX Graphics User's Guide</i> (IMXGRAPHICUG) for more details. One GC7000-Lite on 8M Quad. One GC7000-Ultra-Lite on 8M Nano. One GC7000-NanoUltra and GC320 on 8M Mini. One GC7000-Ultra-Lite and GC520I on 8M Plus. Two GC7000XSVX on 8QuadMax. One GC7000-Lite on 8QuadXPlus. |

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|----------------------------------------|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | <p>One GC7000-NanoUltra and GC328 on 7ULP.</p> <p>GC2000, GC355, and GC320 on 6Dual/6Quad.</p> <p>GC2000+, GC355, and GC320 on 6QuadPlus.</p> <p>GC880 and GC320 on 6Solo/DualLite.</p> <p>GC400T on 6SoloX.</p> <p>The GPU on the chips listed above supports these features that include 2D and 3D hardware acceleration:</p> <ul style="list-style-type: none"> • Supports EGL 1.5 for fbdev, X11, XWayland • Supports OpenGL ES1.1 • Supports OpenGL ES2.0 (WebGL 1.0.1 compatible on X11) • Supports OpenGL ES3.0 on all except i.MX 6SoloX, 7ULP, and 8M Mini which support 2.0 only • Supports OpenGL ES3.1 i.MX 8QuadMax, 8QuadXPlus, 8DualX, 8M Plus, and 8M Quad • Supports OpenGL ES3.2 on i.MX 8QuadMax • Supports Vulkan 1.1 on i.MX 8QuadMax, 8QuadXPlus, 8DualX, 8M Plus and 8M Quad • Supports OpenVX on i.MX 8QuadMax and 8M Plus • Supports OpenVG1.1 • Supports OpenCL1.1 on GC2000 on i.MX 6Quad • Supports OpenCL1.2 on GC7000SXVX, GC7000L, and GC2000+ on i.MX 6QuadPlus, 8QuadMax, 8QuadXPlus, 8DualX, and 8M Quad. • Supports OpenGL2.1 |
| Frame Buffer Display | All i.MX 6 and 7 | <p>MXC Frame buffer driver for IPU V3 on i.MX 6SABRE-SD and i.MX 6SABRE-AI.</p> <p>MXC Frame buffer driver for PXP on i.MX 6SoloX SABRE-SD, i.MX 6UltraLite EVK, i.MX 6ULZ EVK i.MX 6ULL EVK, and i.MX 7Dual SABRE-SD.</p> |
| Direct Rendering Manager (DRM) Display | All i.MX 8 | <p>i.MX DPU DRM is used for i.MX 8QuadMax and 8QuadXPlus.</p> <p>LCDIF is used for all i.MX 8M.</p> <p>DCSS is used for i.MX 8M Quad.</p> <p>DCNANO is used for i.MX 8ULP.</p> |
| Framebuffer compression | 8M Quad | Supports graphic framebuffer compression with DEC400. |
| VDOA | 6SABRE-SD 6SABRE-AI | Supports Video Data Order Adapter for tiling. |

Table continues on the next page...

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|-------------------|--------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LVDS | 6SABRE-SD 6SABRE-AI 6SoloX-SD 8QuadMax 8QuadXPlus 8M Plus | Supports HannStar LVDS panel on i.MX 6. It is the default display if no other video option is set up. Uses the LDB controller. On the SABRE-AI there are two ports. Port 0 is the default. For i.MX 8, it supports the Mixel controller. |
| HDMI Display | 6SABRE-SD 6SABRE-AI 6SoloX-SD 7D-SABRE-SD 7ULP | i.MX 6SABRE-SD, 6SABRE-AI, and 7Dual support on-chip HDMI hardware. i.MX 6SoloX SABRE-SD supports external HDMI hardware. i.MX 7ULP EVK supports HDMI through the MIPI pins with external HDMI hardware. |
| HDMI/Display Port | 8M Quad 8QuadMax 8M Plus | i.MX 8QuadMax supports HDMI audio and on-chip HDMI hardware. i.MX 8M Quad supports HDMI through DCSS. i.MX 8M Plus only supports HDMI. |
| LVDS to HDMI | 8QuadMax 8M Plus 8QuadXPlus | Uses ITE Driver IT6263. |
| MIPI to HDMI | All i.MX 8 7ULP | Uses Advantec adv7535. |
| HDCP | 6SABRE-SD i.MX 8M 8QuadMax | Supports HDCP v1.2 specifications on specific HDCP parts. i.MX 8QuadMax can support HDCP v1.4 (for TX) and HDCP v2.2 (for RX and TX). |
| MIPI-DSI Display | 6SABRE-SD All i.MX 7 i.MX 8 | Supports 2 lanes through MIPI daughter card on i.MX 6 and i.MX 7-SABRE-SD. Supports 2 lanes MIPI DSI with direct connection on i.MX 7ULP. The default display for i.MX 7ULP EVK board is HDMI. MIPI DSI supports with hardware rework. Supports 4 lanes driven by DPU with up to 1080p60 on i.MX 8QuadMax and 8QuadXPlus. Supports 4 lanes driven by LCDIF with up to 720p60 on i.MX 8M Quad. Supports 4 lanes driven by LCDIF up to 1920x1200p60 on i.MX 8M Mini, 8M Nano, and 8M Plus. Supports 4 lanes driven by DCSS with up to 1080p60 on i.MX 8M Quad. Supports RM67191 OLED display panel through the MIPI DSI on i.MX 8. |

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|----------------------|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | Supports RM67199 OLED display panel through the MIPI DSI on i.MX 8M Mini, 8M Nano, 8M Plus, and 8M Quad. Supports RM68200 OLED display panel through the MIPI DSI on i.MX 8ULP. |
| Parallel-LCD Display | All i.MX 6 All i.MX 7 | Supports SEIKO WVGA panel. For i.MX 6UltraLite, i.MX 6ULZ, i.MX 6ULL, and i.MX 7Dual SABRE-SD, it supports Embest LCD8000-43T LCD panel. |
| PxP | 6DualLite-SD 6SLL 6SoloX-SD 7D-SABRE-SD 6UltraLite 6ULL 6ULZ | Enables PxP Driver for EPDC. Conforms to DMA engine framework. |
| EPDC | 6DualLite-SD 6SLL 6ULL 6ULZ 7D-SABRE-SD | Supports RGB565 frame buffer format. Supports Y8 frame buffer format. Supports full and partial EPD screen updates. Supports up to 256 panel-specific waveform modes. Supports automatic optimal waveform selection for a given update. Supports synchronization by waiting for a specific update request to complete. Supports screen updates from an alternate (overlay) buffer. Supports automated collision handling. Supports 64 simultaneous update regions. Supports pixel inversion in a Y8 frame buffer format. Supports posterization of the update contents (driving all pixels to either solid black or white). Supports use of a color map to remap Y8 frame buffer contents. Supports 90, 180, and 270 degree HW-accelerated frame buffer rotation. Supports panning (y-direction only). Supports three EPDC driver display update schemes: Snapshot, Queue, and Queue and Merge. Supports user control of the delay between completing all updates and powering down the EPDC. Supports dithering. |

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|------------------------------|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | i.MX 7Dual supports E Ink but requires a separate download. Contact Marketing representative. |
| VPU | 6SABRE-SD 6SABRE-AI All i.MX 8 | i.MX 6 Encoder: MPEG-4, H.263, H.264 (AVC/MVC), MJPEG i.MX 8QuadMax and 8QuadXPlus Encoder: H.264 i.MX 6 Decoder: MPEG-4, H.263, H.264 (AVC/MVC), VC-1, MPEG-2, MJPEG, AVS, VP8 i.MX 8QuadMax and 8QuadXPlus Decoder: HEVC, H.264, MPEG4, MPEG2 i.MX 8M Quad Decoder: HEVC, VP9, H.264, VP8, RV9, AVS, MJPEG, H.263 i.MX 8M Mini Decoder: HEVC, VP9, H.264, VP8 i.MX 8M Mini Encoder: H.264, VP8 i.MX 8M Plus Encoder: 1080p60 HEVC, H.264 i.MX 8M Plus Decoder: 1080p60 HEVC, H.264, VP9, VP8 |
| DPU | 8QuadMax 8QuadXPlus | Supports through DRM display framework and provides 2D Graphics processing. Supports DPR tiling. |
| DCSS | 8M Quad | Supports display frame buffers in memory out to Ultra HD or HDTVs. |
| DCNANO | 8ULP | Supports through DRM display framework. |
| IPU | 6SABRE-SD 6SABRE-AI | On i.MX 6SABRE-SD and i.MX 6SABRE-AI, the IPU driver provides interfaces to access IPU V3 modules. |
| PRE/PRG driver | 6QuadPlus-SD 6QuadPlus-AI | On i.MX 6QuadPlus provides interfaces to support prefetch linear frames or resolve tiled frames for display. |
| V4L2 Output | All i.MX 6 All i.MX 7 | i.MX 6SABRE-SD and i.MX 6SABRE-AI use the IPU post-processing functions for video output. i.MX i.MX 6SoloX SABRE-SD, 6UltraLite, 6ULL, 6ULZ EVKs and i.MX 7D SABRE-SD use the PXP post-processing functions for video output. i.MX 7ULP EVK uses MIPI connection for V4L2 output. |
| Video Capture drivers | | |
| V4L2 Capture | All i.MX | Supports 2 cameras on i.MX 6SABRE-SD and SABRE-AI. Supports 1 camera on i.MX 6SoloX SABRE-SD, 6UltraLite EVK, 6ULL EVK, 6ULZ EVK and 7D-SABRE-SD, and i.MX 8M Mini. Supports 2 cameras on i.MX 8M Quad and i.MX 8M Plus and 1 camera on i.MX 8M Mini, and 8M Nano. Supports 4 cameras on i.MX 8QuadXPlus. Supports 8 cameras on i.MX 8QuadMax. |

Table continues on the next page...

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|------------------------|----------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MIPI Camera CSI | 6SABRE-SD 7D-SABRE-SD 7ULP All i.MX 8M 8QuadMax 8QuadXPlus | Supports 2-lane CSI MIPI camera OV5640 with 720p30, 640x480@30, 320x240@30, 720x480@30, 1080p@30, 2592x1944@15, 176x144@30. Also supports CSI MIPI camera OV10635 with 1280x800@30, ov10635 max supports 1280x800@30, and ISI does not support upscale, so 1080p, 2592x1944 cannot be supported on i.MX 8QuadMax and 8QuadXPlus. Supports 4-lane Basler CSI MIPI cameras AR0821 with 4K@30 with ISP on i.MX 8M Plus. |
| Parallel CSI | 6SABRE-SD 6SoloX-SD 6UltraLite 6ULL 6ULZ 6SLL 8QuadXPlus | Supports OV5640 camera sensor. |
| ISI | 8QuadMax 8QuadXPlus 8M Nano 8M Plus | Supports capture through ISI controller. |
| ISP | 8M Plus | Supports capture through ISP controller. Supports AE/AF/AWB/DEWARP/LSC/CPROC, etc. |
| IPU-CSI | 6SabreSD | Supports capture through IPU CSI controller. |
| TV-IN | 6SABRE-AI 8QuadMax | Supports TV-IN through ADV7180 on the 6SABRE-AI with bt656, NTSC, and PAL. Supports TV-IN through ADV7180 on the 8QuadMax with NTSC, and PAL. |
| General drivers | | |
| uSDHC | All i.MX | Supports SD2.0 and SDXC. Supports SD3.0 on all i.MX except 6SABRE-SD. Supports eMMC 1bit/4bit/8bit SDR/DDR mode. i.MX 6SABRE-SD is soldered, i.MX 6SABRE-AI uses the daughter card, and i.MX 6SoloX-SD is not soldered. Supports eMMC4.5 on i.MX 6SoloX-SD. Supports eMMC5.0 on i.MX 7Dual SABRE-SD. Supports eMMC5.1 on i.MX 8 and i.MX 8M. |
| Watchdog | All i.MX | Supports Watchdog reset. |

Table continues on the next page...

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|-----------------------|--------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| I ² C | All i.MX | Supports I ² C master. Supports PCA9646 I ² C switch on i.MX 8QuadXPlus. |
| SPI | All i.MX | Supports SPI master mode and slave mode. |
| Pulse Width Modulator | All i.MX | Supports the backlight driver through PWM. |
| ADC | 6SoloX-SD 7D-SABRE-SD 6UltraLite 6ULL 6ULZ 7ULP 8QuadMax 8QuadXPlus | Supports the ADC driver. |
| Temperature monitor | All i.MX | Pre-calibrated. See the "Thermal Driver" chapter in <i>i.MX Linux Reference Manual</i> (IMXLXRM) for more information. |
| Accelerometer | 6SABRE-SD 6SABRE-AI 6SoloX-SD 6UltraLite 6ULL 6ULZ 7D-SABRE-SD 7ULP 8QuadXPlus | Supports the MMA8451 sensor on i.MX 6SABRE and i.MX 6SoloX. Supports the FXLS8471Q sensor on 6UltraLite EVK, 6ULZ and 6ULL EVK. Supports the FXOS8700 sensor on the i.MX 7. Supports the FXOS8700 sensor on the i.MX 8. |
| GPIO Expander | 6SABRE-SD 6SABRE-AI 7D-SABRE-SD 8QuadMax 8QuadXPlus | Supports the MAX7310 GPIO expander on i.MX 6 SABRE-SD and SABRE-AI. Supports the 74LV595 GPIO expander on i.MX 7Dual SABRE-SD. Supports PCA9557 and PCA6416 on i.MX 8. |
| SNVS RTC | All i.MX 6 All i.MX 7 All i.MX 8 | SNVS is a block that interfaces with CAAM and SRTC. |

Table continues on the next page...

Table 8. Supported features (continued)

| Feature | Supported board | Comment |
|----------------------|---------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Ambient Light Sensor | 6SABRE-SD 6SABRE-AI 6SoloX-SD 8QuadMax 8QuadXPlus | Supports the ISL29023 sensor on i.MX 6 SABRE-SD, SABRE-AI, and 6 SoloX boards. Supports the ISL29023 sensor on i.MX 8QuadMax and i.MX 8QuadXPlus boards |
| Gyroscope Sensor | All i.MX 7 | Supports FXA2100 gyroscope sensor. |
| Pressure Sensor | 7D-SABRE-SD 8QuadMax 8QuadXPlus | Supports MPL3115 pressure sensor. |
| Magnetometer Sensor | i.MX 6 | Supports MAG3110 magnetometer sensor on all i.MX 6 except 6SLL. |
| AM/FM module | 6SABRE-AI | Supports the SI4763 AM/FM module. Supports FM by using the SSI interface. |

5 U-Boot and Device Trees

This section describes the different U-Boots and device trees, as well as different kernel and boot parameters.

5.1 U-Boot configurations

In the following table, the U-Boot configurations are listed for each machine configuration. The machine configurations are provided through the Yocto Project layers in the `meta-freescale` and `meta-imx` layers in the `conf/machine` subdirectory.

Table 9. U-Boot configurations

| U-Boot configuration for Boot device | Description | Supported machine configuration |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sd | <p><code>sd</code> supports boot from an SD card. This is the default U-Boot configuration.</p> <p>For boards supporting eMMC, such as i.MX 6QuadPlus/Quad/DualLite, SD boot can be flashed in eMMC for boot from eMMC instead of an SD card.</p> | <p><code>imx6qsabresd</code>, <code>imx6qpsabresd</code>, <code>imx6dlsabresd</code> <code>imx6qsabreauto</code>, <code>imx6qpsabreauto</code>, <code>imx6dlsabreauto</code> <code>imx6sllevk</code> <code>imx6xsabresd</code> <code>imx7dsabresd</code> <code>imx6ulevk</code> <code>imx6ull14x14evk</code> <code>imx6ullz4x14evk</code> <code>imx7ulpevk</code> <code>imx8qmmek</code> <code>imx8qxpmek</code>, <code>imx8qxc0mek</code></p> |

Table continues on the next page...

Table 9. U-Boot configurations (continued)

| U-Boot configuration for Boot device | Description | Supported machine configuration |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | imx8mqevk imx8mmevk imx8mnevk imx8mpevk imx8dxlevk, imx8dxlddr3evk |
| spi-nor | Supports booting from SPI-NOR. | imx6qsabreauto, imx6dlsabreauto imx6qpsabreauto |
| eim-nor | Supports booting from Parallel NOR. | imx6qsabreauto, imx6dlsabreauto, imx6solosabreauto imx6qpsabreauto |
| nand | Supports booting from NAND. | imx6qsabreauto, imx6dlsabreauto, imx6solosabreauto imx6qpsabreauto imx7dsabresd imx6ull14x14evk |
| sata | Supports booting from SATA. | imx6qsabresd, imx6qpsabresd imx6qsabreauto, imx6qpsabreauto |
| qspi | Supports booting from QSPI. Booting from the Arm Cortex-M4 processor is supported through QSPI2 and QSPI1. Use U-Boot command <code>bootaux</code> to boot the Arm Cortex-M4 processor. The booting address for QSPI2 is 0x78000000. The booting address for QPIS1 is 0x68000000. | imx6sxsabresd with QSPI2 imx7dsabresd with QSPI1 imx6ulevk with QSPI1 imx6ulz14x14evk with QSPI1 |
| emmc | Supports boot from eMMC. eMMC is not populated on the reference boards listed. Users need to populate it if needed. For other boards supporting eMMC such as i.MX 6QuadPlus/Quad/DualLite, SD boot is used. | imx6sxsabresd imx7dsabresd imx6ull14x14evk imx6ulz14x14evk imx7ulpevk imx8qmmek imx8qpc0mek imx8dxlevk imx8mpevk imx8mmevk imx8ulpevk |

Table continues on the next page...

Table 9. U-Boot configurations (continued)

| U-Boot configuration for Boot device | Description | Supported machine configuration |
|--------------------------------------|------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|
| m4fastup | Supports booting from Arm Cortex-M4 processor by disabling QSPI2 from using Arm Cortex-M4 processor. | imx6xsabresd |
| epdc | Supports EPDC splash screen in U-Boot. | imx7dsabresd |
| flexspi (fspi) | Supports FlexSPI boot. | imx8qmmek imx8qxpmeek imx8qxc0mek imx8dxlevk imx8mmevk imx8mnevk imx8mpevk imx8ulpevk |

5.2 Kernel device trees

The following table describes the kernel and device trees included in this release. A list of several device tree files is provided for each board to offer examples on how to handle different pin conflicts due to pin muxing.

Table 10. Kernel and device tree configurations

| Kernel and device tree configuration | Description |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Kernel Binary Image | <p>i.MX 6 and i.MX 7 zImage kernel is built with the <code>imx_v7_defconfig</code> in <code>arch/arm/configs</code>.</p> <p>i.MX 8 Image kernel is built with <code>imx_v8_defconfig</code> in <code>arch/arm64/configs</code>.</p> |
| DTB Descriptions | <p>Each reference board has a standard device tree as follows:</p> <ul style="list-style-type: none"> • <code>imx6q-sabresd.dtb</code>, <code>imx6qp-sabresd.dtb</code> • <code>imx6dl-sabresd.dtb</code> • <code>imx6q-sabreauto.dtb</code>, <code>imx6qp-sabreauto.dtb</code> • <code>imx6dl-sabreauto.dtb</code> • <code>imx6sx-sdb.dtb</code> supports the i.MX 6SoloX SABRE-SDB Rev. B board, and <code>imx6sx-sdb-reva.dtb</code> supports the SABRE-SDB Rev. A board. • <code>imx7d-sdb.dtb</code> supports the i.MX 7Dual SABRE-SDB Rev. C and Rev. D boards, and <code>imx7d-sdb-reva.dtb</code> supports the Rev. A board. • <code>imx6ul-14x14-evk.dtb</code>, <code>imx6ul-9x9-evk.dtb</code> • <code>imx6ulz-14x14-evk.dtb</code> • <code>imx6ull-14x14-evk.dtb</code> |

Table continues on the next page...

Table 10. Kernel and device tree configurations (continued)

| Kernel and device tree configuration | Description |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | <ul style="list-style-type: none"> • <code>imx7ulp-evk.dtb</code> • <code>imx8mq-evk.dtb</code> • <code>imx8mm-evk.dtb</code>, <code>imx8mm-ddr4-evk</code> • <code>imx8mn-evk.dtb</code>, <code>imx8mn-ddr4-evk.dtb</code>, <code>imx8mn-ddr3l-evk.dtb</code> (for i.MX 8M NanoUltraLite) • <code>imx8mp-evk.dtb</code>: Supports single or multiple displays with HDMI, MIPI-DSI-HDMI, and LVDS-HDMI • <code>imx8dxl-evk.dtb</code> • <code>imx8qm-mek.dtb</code>: Supports the LVDS-HDMI or MIPI-DSI-HDMI display with the LVDS-HDMI or MIPI-DSI-HDMI converts. The detection is on-the-fly by using the device-tree overlay technology. It is for non-partition boot that <code>flash.bin</code> does not include the Cortex-M4 image. • <code>imx8qm-mek-rpmsg.dtb</code>: Supports partition reset, and supports the LVDS-HDMI or MIPI-DSI-HDMI display with the LVDS-HDMI or MIPI-DSI-HDMI converts. This requires <code>flash.bin</code> to include the Cortex-M4 image. • <code>imx8qxp-mek.dtb</code>: Supports one LVDS-HDMI through the LVDS0-CH0 on the LVDS-HDMI daughter card. It is for non-partition boot that <code>flash.bin</code> does not include the Cortex-M4 image. • <code>imx8ulpevk.dtb</code> |
| Audio | <p>Enables various audio device trees.</p> <ul style="list-style-type: none"> • <code>imx8ulp-evk-sof-btsco.dtb</code>: sound open firmware • <code>imx8mp-ab2.dtb</code>: audio board • <code>imx8mp-evk-sof-wm8960.dtb</code>: Sound open firmware for WM8960 audio • <code>imx8mq-evk-ak4497.dtb</code>: audio board ak4497 codec • <code>imx8mq-evk-pdm.dtb</code>: PDM microphone • <code>imx8mq-evk-audio-tdm.dtb</code>: audio board TDM • <code>imx8mm-evk-ak4497.dtb</code>: audio board ak4497 codec • <code>imx8mm-evk-ak5558.dtb</code>: audio board ak5558 codec • <code>imx8mm-evk-audio-tdm.dtb</code>: audio board TDM • <code>imx8mn-dd4-evk-ak5558.dtb</code>: audio board TDM • <code>imx7ulp-evk-wm8960.dtb</code>: Enables WM8960 audio as the default one and disables HDMI audio • <code>imx7d-sdb-reva-hdmi-audio.dtb</code>: Enables HDMI audio as the default one and disables WM8960 audio |
| Bluetooth® wireless technology Wi-Fi | <p>Enables the Bluetooth wireless technology and Wi-Fi hardware.</p> <p>The followings support Azurewave AW-CM276MA-PUR with NXP PCIe 88W8997 chip inside:</p> |

| GPMI and EIM_NOR | <p>Enables the GPMI and EIM-NOR. Due to pin conflicts, the GPMI and EIM-NOR are disabled by default. See the device tree file for more details:</p> <ul style="list-style-type: none"> • <code>imx6dl-sabreauto-gpmi-weim.dtb</code> • <code>imx6q-sabreauto-gpmi-weim.dtb</code> • <code>imx6qp-sabreauto-gpmi-weim.dtb</code> • <code>imx7d-sdb-gpmi-weim.dtb</code>, <code>imx7d-sdb-reva-gpmi-weim.dtb</code> • <code>imx6ulz-14x14-evk-gpmi-weim.dtb</code> |
| HDCP | <p>Enables the HDMI-HDCP feature. This avoids the pin conflict between the I2C2 and HDCP-DDC pins.</p> <ul style="list-style-type: none"> • <code>imx6q-sabresd-hdcp.dtb</code> • <code>imx6dl-sabresd-hdcp.dtb</code> • <code>imx6qp-sabresd-hdcp.dtb</code> |
| Hypervisor Jailhouse | <p>Enables the Jailhouse Hypervisor device trees.</p> <ul style="list-style-type: none"> • <code>imx8qxp-mek-root.dtb</code>: DTB for root-cell • <code>imx8qxp-mek-inmate.dtb</code>: DTB for the inmate cell • <code>imx8qm-mek-root.dtb</code>: DTB for root-cell • <code>imx8qm-mek-inmate.dtb</code>: DTB for the inmate cell • <code>imx8mq-evk-root.dtb</code>: DTB for root-cell • <code>imx8mq-evk-inmate.dtb</code>: DTB for the inmate cell • <code>imx8mm-evk-root.dtb</code>: DTB for root-cell • <code>imx8mm-evk-inmate.dtb</code>: DTB for the inmate cell • <code>imx8mq-evk-root.dtb</code>: Supports Jailhouse hypervisor • <code>imx8mm-evk-root.dtb</code>: Supports Jailhouse hypervisor • <code>imx8mn-evk-root.dtb</code>: Supports Jailhouse hypervisor • <code>imx8mn-evk-inmate.dtb</code>: DTB for the inmate cell • <code>imx8mp-evk-inmate.dtb</code>: DTB for the inmate cell • <code>imx8mp-evk-root.dtb</code>: DTB for root-cell • <code>imx8dxl-evk-root.dtb</code>: DTB for root-cell • <code>imx8dxl-evk-inmate.dtb</code>: DTB for inmate cell |
| Hypervisor Xen | <p>Enables the Xen Hypervisor device trees</p> <ul style="list-style-type: none"> • <code>imx8qxp-mek-dom0.dtb</code>: Xen Linux guest Linux DTB file. • <code>imx8qm-mek-dom0.dtb</code>: Supports Xen hypervisor dom0. • <code>imx8qm-mek-dom0-dpu2.dtb</code>: Supports the Xen hypervisor dom0 dpu2. |

Table continues on the next page...

Table 10. Kernel and device tree configurations (continued)

| Kernel and device tree configuration | Description |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | <ul style="list-style-type: none"> • <code>imx8qm-mek-domu.dtb</code>: Supports Xen hypervisor domu. • <code>imx8qm-mek-domu-dpu1.dtb</code>: Supports Xen hypervisor domu-dpu1. • <code>imx8qm-mek-domu-dpu1-hdmi.dtb</code>: Supports the Xen hypervisor domu-dpu1-hdmi. |
| LDO | <p>In standard DTB file, the LDO bypass is enabled. Therefore, to use LDO device trees on configurations with CPU@1.2GHz, which does not support LDO bypass mode, it is important to enable LDO. The LDO is enabled in the following DTB files:</p> <ul style="list-style-type: none"> • <code>imx6q-sabresd-ldo.dtb</code> • <code>imx6qp-sabresd-ldo.dtb</code> • <code>imx6ul-9x9-evk-ldo.dtb</code> • <code>imx6dl-sabresd-ldo.dtb</code> • <code>imx6sx-sdb-ldo.dtb</code>, <code>imx6sx-sdb-reva-ldo.dtb</code> |
| LP UART | <p>Enables LPUART.</p> <ul style="list-style-type: none"> • <code>imx7ulp-evk-lpuart.dtb</code> |
| Multi-Core, M4 and RPMSG | <p>Enables the M-Core and RPMSG</p> <ul style="list-style-type: none"> • <code>imx8mp-evk-rpmsg.dtb</code>: RPMSG. • <code>imx8dxl-evk-rpmsg.dtb</code>: RPMSG. • <code>imx8qxp0-mek-rpmsg</code> and <code>imx8qxp-mek-rpmsg</code> with RPMSG • <code>imx8qxp-mek-rpmsg.dtb</code>: Supports partition reset, RPMSG audio codec on Cortex-M4, and supports the LVDS-HDMI or MIPI-DSI-HDMI display with the LVDS-HDMI or MIPI-DSI-HDMI converts. This requires the <code>flash.bin</code> to include the Cortex-M4 image. • <code>imx8qm-mek-rpmsg.dtb</code>: Supports partition reset, and supports the LVDS-HDMI or MIPI-DSI-HDMI display with the LVDS-HDMI or MIPI-DSI-HDMI converts. This requires <code>flash.bin</code> to include the Cortex-M4 image. • <code>imx8qm-mek_ca53.dtb</code>: Supports four CortexA53 cores only. • <code>imx8qm-mek_ca72.dtb</code>: Supports two Cortex-A72 cores only. You need to build the special boot image through the <code>imx-mkimage</code> tools, and select the <code>flash_ca72</code> build target. • <code>imx8qm-mek-enet2-tja1100.dtb</code>: Supports the tja1100 ENET daughter card. • <code>imx8mq-evk-rpmsg.dtb</code>: RPMSG. • <code>imx8mm-evk-rpmsg.dtb</code>: RPMSG. • <code>imx8mn-evk-rpmsg.dtb</code> and <code>imx8mn-ddr4-evk-rpmsg.dtb</code>: RPMSG. • <code>imx6sx-sdb-m4.dtb</code>: Disables the access of ADC 1 and 2, FlexCAN 1 and 2, I2C3, UART 2 and QSPI 2 from Cortex-A processor when Arm Cortex-M4 processor is running. |

Table continues on the next page...

Table 10. Kernel and device tree configurations (continued)

| Kernel and device tree configuration | Description |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | <ul style="list-style-type: none"> <code>imx6sx-sabreauto-m4.dtb</code>: Disables the access of ADC 1 and 2, FlexCAN 1 and 2, I2C3, UART 2 and QSPI 2 from Cortex-A processor when Arm Cortex-M4 processor is running. <code>imx7d-sdb-m4.dtb</code>: Disables the access of ADC 1 and 2, FlexCAN 1 and 2, I2C3, UART 2, and QSPI 2 from Cortex-A processor when Arm Cortex-M4 processor is running. <code>imx8qxp-mek-sof-wm8960.dtb</code>, <code>imx8qm-mek-sof-wm8960.dtb</code>: Enables playback/record using Sound Open Firmware for HiFi4 DSP with WM8960 codec. <code>imx8qm-mek-sof-cs42888.dtb</code>, <code>imx8qm-mek-sof-cs42888.dtb</code>: Enables playback/record using Sound Open Firmware for HiFi4 DSP with CS42888 codec. <p>On i.MX 8QuadMax and 8QuadXPlus, multiple partitions are supported. Due to the board design, <code>flash.bin</code> and the DTB need to be matched. If <code>flash.bin</code> includes the Cortex-M4 partition, use <code>x-rpmsg.dtb</code>.</p> |
| Qspi | <p>Enables DDR Quad mode for Macronix QSPI chip mx25l51245g by setting Quad bit in status register.</p> <ul style="list-style-type: none"> <code>imx7-sdb-qspi.dtb</code>, <code>imx7-sdb-reva-qspi.dtb</code> <code>imx7ulp-evk-qspi.dtb</code> |
| SD1 | <p>Enables sd1 on uSDHC1 on the base board.</p> <ul style="list-style-type: none"> <code>imx7ulp-sd1.dtb</code> |
| Touch | <p>Adds tsc2046 touch screen controller support. Because the pin PENIRQ of tsc2046 conflicts with the interrupt pin of HDMI, this disables the HDMI.</p> <ul style="list-style-type: none"> <code>imx7-sdb-reva-touch.dtb</code> |
| USB | <p>Enables USB certification for i.MX 6UltraLite.</p> <ul style="list-style-type: none"> <code>imx6ul-14x14-evk-usb-certi.dtb</code> |
| DPDK | <p><code>imx8mm-evk-dpdk.dtb</code>: DTB file to export FEC Ethernet port to Userspace DPDK “enetfec” driver.</p> |

5.3 Kernel boot parameters

Depending on the booting or usage scenario, you may need different kernel boot parameters.

The following table describes different boot parameters.

To force the i.MX 6SABRE-AI board to disable SMP to remove overhead, add boot parameters `nosmp`. Disabling `CONFIG_SMP` configuration can remove further overhead for single core.

Table 11. Common kernel boot parameters

| Kernel parameter | Description | Typical value | Used when |
|------------------|------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| console | Where to output the kernel logging by printk. | For i.MX 6 SABRE-SD, console=ttyMXC0, 115200 For i.MX 6 SABRE-AI, console=ttyMXC3, 115200 For i.MX 7ULP, console=ttyLP0, 115200 For i.MX 8QuadMax, console=ttyLP0, 115200 earlycon | All use cases |
| nosmp | A command-line option of nosmp disables SMP activation entirely. | nosmp | CONFIG_SMP is defined. Use this to disable SMP activation. SMP is activated by default through the CONFIG_SMP configuration. |
| ip | Tells the kernel how or whether to get an IP address. | ip=none ip=dhcp ip=static_ip_address | ip=dhcp or ip=static_ip_address is mandatory in boot from TFTP/NFS. |
| nfsroot | Location of the NFS server/directory. | nfsroot=<ip_address>:<rootfs path> | Used in "boot from tftp/NFS" together with root=/dev/nfs. |
| root | Location of the root file system. | root=/dev/nfs or root=/dev/mmcblk0p2 | Used in "boot from tftp/NFS" (that is, root=/dev/nfs); Used in "boot from SD" (that is, root=/dev/mmcblk0p2). root is set by default by U-Boot to the SD/MMC slot that U-Boot is booting from. |
| rootfstype | Indicates the file system type of the root file system. | rootfstype=ext4 | Used in "boot from SD" together with "root=/dev/mmcblkXpY" (X is the MMC device number while Y is the rootfs partition number.) |
| rootwait | Waits (indefinitely) for the root device to show up. | rootwait | Used when mounting SD root file system. |
| mem | Tells the kernel how much memory can be used. | None or mem=864M | Note: MemTotal-<mem> - <gpu_memory> is reserved. |
| max17135 | Configures the maximum of 17135 EPD PMIC | max17135:pass=[pass_num], vcom=[vcom_uV] | Used when enabling EPDC. pass_num should equal 2 for all IMXEB00KDC2 cards. vcom_uV, in microvolts, should be equal to the value printed on the |

Table continues on the next page...

Table 11. Common kernel boot parameters (continued)

| Kernel parameter | Description | Typical value | Used when |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | pass number and VCOM voltage. | For 7D-SABRE-SD (EPDC panel upgrade to DC4): <code>max17135:pass=2, vcom=-2370000</code> | cable connector that is attached the E Ink panel being used. |
| <code>fec.macaddr</code> | Tells the Ethernet MAC address. | <code>fec.macaddr=0x00, 0x04, 0x9f, 0x01, 0x30, 0x05</code> | Changes the FEC MAC address. |
| <code>maxcpus</code> | [SMP] Maximum number of processors that SMP kernel should use. | <code>maxcpus=1</code> | <code>maxcpus=n</code> : <code>n >= 0</code> limits the kernel to using 'n' processors. <code>n=0</code> is a special situation. It is equivalent to <code>nosmp</code> . |
| <code>epdc</code> | Enables EPDC. | <code>video=mxcepdcfb:E060SCM, bpp=16</code> For 7D-SABRE-SD (EPDC panel upgrade to DC4): <code>video=mxcepdcfb:ED060XC8</code> | Adds to kernel options only if E Ink is the primary display panel. If other display panel is primary, this option may result in a pixel clock conflict and improper display function. |
| <code>video on 6SABRE-SD</code> | Tells the kernel/driver which resolution/depth and refresh rate should be used for display port 0 or 1. See the parameter information under <code>Documentation/fb/modedb.txt</code> . Tells the kernel/driver which IPU display interface format should be used. | <ol style="list-style-type: none"> <code>video=mxcfb0:dev=hdmi, 1920x1080M@60, if=RGB24</code> <code>video=mxcfb1:dev=ldb, if=RGB666</code> <code>video=mxcfb0:dev=ldb, if=RGB666</code> <code>video=mxcfb1:dev=hdmi, 1920x1080M@60, if=RGB24</code> <code>video=mxcfb0:dev=hdmi, 1920x1080M@60, if=RGB24</code> <code>video=mxcfb0:dev=ldb, if=RGB666</code> <code>video=mxcfb0:dev=lcd, CLAA-WVGA, if=RGB656</code> <code>video=mxcfb0:dev=mipi_dsi, TRULY-WVGA, if=RGB24</code> | <ol style="list-style-type: none"> Used when primarily displaying on HDMI with 1080P60 mode. Secondly displaying on LVDS with XGA mode. Used when primarily displaying on LVDS with XGA mode. Secondly displaying on HDMI with 1080P60 mode. Used when primary displaying on HDMI with 1080P60 mode. Used when primary displaying on the HannStar LVDS1. Used when primary displaying on the CLAA-WVGA dumb parallel LCD panel. Used when primary displaying on the TRULY-WVGA MIPI DSI LCD panel. <p>NOTE: GBR24/RGB565/YUV444 represents the display HW interface format. Typical values for certain different display devices are as follows:</p> <p>TVOUT: YUV444</p> <p>VGA: GBR24</p> <p>HDMI&DVI: RGB24</p> <p>CLAA WVGA LCD: RGB565</p> |

Table continues on the next page...

Table continues on the next page...

Table 11. Common kernel boot parameters (continued)

| Kernel parameter | Description | Typical value | Used when |
|------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | hdmi: HDMI on-chip or sii902x dvi: DVI port vga: VGA through TVE tve: TVOUT |
| video on 7D SABRE-SD | Tells the ELCDIF FB driver which LCD panel is in use and which bpp should be used for the Frame Buffer. | video=mxcfb0:dev=mipi_dsi,TRULY-WVGA,if=RGB24 | Used when primary displaying on the TRULY-WVGA MIPI DSI LCD panel. |
| dmfc | Tells the kernel/driver how to set the IPU DMFC segment size. | None Or dmfc=3 | dmfc=1 means DMFC_HIGH_RESOLUTION_DC. dmfc=2 means DMFC_HIGH_RESOLUTION_DP. dmfc=3 means DMFC_HIGH_RESOLUTION_ONLY_DP. DMFC_HIGH_RESOLUTION_ONLY_DP can only be set by the command line. It is recommended to set this when no IPU connects the two panels. When it is set, each IPU can only connect one panel. |
| mtdparts on 6SABRE-AI | Tells the kernel MTD partition information. | mtdparts=gpmi-nand:16m (boot), 16m (kernel), 1024m (rootfs), - (user) | When to enable NAND. The partition: 16m (boot), 16m (kernel), 1024m (rootfs) is an example. You can change it according to your needs. |
| UART clock from OSC for 6SoloX low power idle and scenario of Linux OS and FreeRTOS running together | Chooses the UART's clock parent. | uart_from_osc | This is necessary for low power idle and all use cases with the FreeRTOS running on Arm Cortex-M4 processor. When setting this parameter, UART sources clock from OSC instead of PLL3_80M, and then all PLLs can be off in low power idle. |
| transparent_hugepage | Controls the default behavior of the system with respect to transparent hugepages. See Documentation/ | always, madvise, never | THP has big impact for the CMA allocation that cannot be isolated from the CMA region, which leads to CMA allocation failure under some conditions. Users can disable the THP by this kernel command line by setting |

NOTE

For full command line list, see kernel source tree `Documentation/Kernel-parameter.txt`.

6 Known Issues/Limitations

Read through all hardware-related reference material and ensure that the necessary hardware modifications are made before using the software.

The following tables list some key known issues.

Table 12. Known issues and workarounds for i.MX 6 Family SoC

| SoC | Module | Source | Description | Workaround |
|-------------|------------|----------|--------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| All | Kernel/BSP | Software | After getting IP address for WLAN 0, the Ethernet is down and loses IP address with the SD card image. | Use <code>connmanctl</code> to set up WLAN 0 instead of directly calling UDHCP. See https://wiki.archlinux.org/index.php/ConnMan#Wi-Fi . |
| i.MX 6SoloX | HWRNG | Software | HWRNG performance drops by 84.6% after suspending/resuming. | It will be fixed in next release. |

Table 13. Known issues and workarounds for i.MX 7 Family SoC

| SoC | Module | Source | Description | Workaround |
|---------------------------------|------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| i.MX 7 family and i.MX 8 family | Kernel/BSP | Software | After getting IP address for WLAN 0, the Ethernet is down and loses IP address with the SD card image. | Use <code>connmanctl</code> to set up WLAN 0 instead of directly calling UDHCP. See https://wiki.archlinux.org/index.php/ConnMan#Wi-Fi . |
| i.MX 7ULP | CAAM | Software | Standby mode suspending fails with CAAM error when using non-optee U-Boot. | It will be fixed in next release. |
| i.MX 7ULP | WDOG | Software | The system does not reboot after RTC suspends/resumes with <code>ioctl</code> . | It will be fixed in next release. |
| i.MX 7Dual | CAAM-RNG | Software | The system hangs after entering <code>busfreq idle</code> or printing <code>caam_jr 30902000.jr: 2000005b: CCB: desc idx 0: RNG: Hardware error</code> . | It will be fixed in next release. |

Table 14. Known issues and workarounds for i.MX 8 Family SoC

| SoC | Module | Source | Description | Workaround |
|---------------|------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| i.MX 8M Plus | ISP | Software | V4L2-CTL full auto test meets the RCU stall issue with Basler camera after the PM test. | It will be fixed in next release. |
| i.MX 8M Nano | ONNX | Software | <code>onnx_test_runner</code> with <code>inception_v4_299</code> meets GPU core hanging when testing with <code>vsi_npu</code> execution provider. | It will be fixed in next release. |
| i.MX 8DXL | OP-TEE | Software | OP-TEE does not work on Rev. A1. | This is due to Rev.A1 LSIO software workaround. It will be fixed in next release. |
| i.MX 8DXL | Kernel/BSP | Software | System suspends/resumes hang-up if <code>init_debug=yes</code> and the USB cable is kept connected after UUU burns image to SD/eMMC. | It will be fixed in next release. |
| i.MX 8QuadMax | Kernel/BSP | Software | RTC Kernel hangs during the suspend resume stress test. | Use a longer wake-up time. |
| i.MX 8QuadMax | Kernel/BSP | Software | Display goes blank or GPU is stuck with suspend resume stress test. | It will be fixed in next release. |
| i.MX 8M Plus | PCIe | Software | When PCIe is supported, there is no EP (end point) device connected on the PCIe port. | Add <code>pcie_cz_enabled=yes</code> to the kernel command line. The PCIe clocks and power supplies should be kept on. Refer to the workaround of one erratum (Erratum TKT0567958). |
| i.MX 8ULP | I3C | Software | The sensor does not work after warm reboot. | It will be fixed in next release. |
| i.MX 8ULP | Bootloader | Software | The eMMC fastboot does not support warm reboot. eMMC fastboot only supports 4 bit SDR setting. | It will be fixed in next release. |
| i.MX 8ULP | SOF | Software | SOF does not support 8K sample rate. It only supports 16K sample rate. | It will be fixed in next release. |
| i.MX 8QuadMax | Kernel | Software | The kernel is not compiled with the proper options for HDMI-RX. | It will be fixed in next release. More about it: https://community.nxp.com/t5/i-MX-Processors-Knowledge-Base/i-mx8qm-HDMI-RX/ta-p/1111058 . |
| i.MX 8QuadMax | VideoIO | Software | DRM kernel crash appears when <code>imx8qm-mek-jdi-wuxga-lvds1-panel.dtb</code> is used at boot and dual-LVDS display is not connected. | It will be fixed in next release. |

7 Multimedia

This chapter provides the information on the 4.6.3 multimedia component of the BSP.

The GStreamer version in this release is 1.18.0.

7.1 i.MX GStreamer plugins

Table 15. i.MX GStreamer 1.0 plugins

| Plugin | Features |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Demux | <p>aiurdemux: aiur universal demuxer plugin supporting</p> <p>Supports AVI, MKV, MP4, MPEG2, ASF, OGG, FLV, WebM, RMVB</p> <p>spdifdemux: Parses IEC937 file into compressed audio</p> |
| Audio decoder | <p>beepdec: unified audio decoder plugin</p> <p>Supports MP3, AAC, AAC+, WMA, AC3, Vorbis, DD+, AMR, RA</p> |
| Audio encoder | <p>lamemp3enc: MP3 encoder plugin</p> |
| Video decoder | <p>i.MX 6 family:</p> <ul style="list-style-type: none"> • vpudec: VPU-based video decoder plugin <p>i.MX 8QuadXPlus or 8QuadMax:</p> <ul style="list-style-type: none"> • v4l2h265dec: V4L2 H.265 Decoder • v4l2h264dec: V4L2 H.264 Decoder • v4l2mpeg4dec: V4L2 MPEG4 Decoder • v4l2xviddec: V4L2 XVID Decoder • v4l2mpeg2dec: V4L2 MPEG2 Decoder • v4l2vc1dec: V4L2 VC1 Decoder • v4l2h263dec: V4L2 H.263 Decoder • v4l2vp6dec: V4L2 VP6 Decoder • v4l2vp8dec: V4L2 VP8 Decoder • v4l2rvdec: V4L2 RMVB Decoder • v4l2spkdec: V4L2 SPK Decoder • v4l2jpegdec: V4L2 JPEG Decode • v4l2video1jpegdec: V4L2 JPEG Decoder <p>i.MX 8M Mini and i.MX 8M Plus:</p> <ul style="list-style-type: none"> • v4l2h265dec: V4L2 H.265 Decoder • v4l2h264dec: V4L2 H.264 Decoder • v4l2vp8dec: V4L2 VP8 Decoder • v4l2vp9dec: V4L2 VP9 Decoder <p>i.MX 8M Quad:</p> |

Table 15. i.MX GStreamer 1.0 plugins (continued)

| Plugin | Features |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| | <ul style="list-style-type: none"> <code>glicolorbalance</code>: adjusting brightness, contrast, hue, and saturation on a video stream |

NOTE

- To support WMA, AAC+, and RA decoding, install separate packages.
- `vpudec` plugins are only for SoCs with the VPU hardware.
- Enable video framebuffer compression (DTRC) by using: `kmssink force-hantrotile=true`.

7.2 i.MX playback example

i.MX provides an example `gplay-1.0` application based on GStreamer's high-level API `GstPlayer`. The example provides the following functions.

Table 16. i.MX playback engine example

| Function | Feature |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Playback | <ul style="list-style-type: none"> Play, Stop Pause, Resume Fast seek, Accurate seek Playback rate control (fast forward, fast rewind, slow forward) |
| Media Info | <ul style="list-style-type: none"> Media metadata (artist, year, etc.) Video Thumbnail Audio Album Art |
| Subtitle | <ul style="list-style-type: none"> Supports internal and external subtitle |
| Track Selection | <ul style="list-style-type: none"> Audio Track Selection Video Track Selection Subtitle Selection |
| Display Control | <ul style="list-style-type: none"> Resize |

7.3 i.MX recording engine API

i.MX provides a high-level API set for camera-related applications based on the GStreamer framework. This API set is based on the `camerabin`, which is from the `gst-plugins-bad` package.

This API can be found at `gst1.0-fsl-plugin/tools/grecorder/recorder_engine.h`.

This API is only supported in i.MX 6 and i.MX 8 platforms, which have a VPU hardware encoder.

This API set can provide the following functions.

Table 17. Recording engine functions

| Function | Feature |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Image capture | Captures images from the camera with different resolutions and saves them to JPEG files. |
| Video recording | Records audio and video into various file formats, supporting (MP3) x (H.264, MPEG4, H.263, MJPEG, HEVC, VP8) x (MP4, MKV, AVI, FLV, TS). |
| Meta data | Adds the time and date information to the captured image or recorded video. |
| Endless recording | Records to multiple file segments and specifies the total file segment count and each file's maximum size. It can record a file endlessly, saving to file segments in a loop. This function can only work with the TS file format. |
| Web camera | Records audio and video, and sends them out through RTP. This function can only work with the TS file format. |
| Graphic effect | Supports adding the graphic effect in the video and record into the file. |
| Device selection | Supports selecting different camera and audio sources. |

NOTE

This recording engine is only available in platforms with VPU.

7.4 Multimedia feature matrix

This section provides feature matrix details of various codecs used for playback.

7.4.1 Parser/Demuxer specifications

The demuxer support of a particular audio or video type requires the availability of the codec.

Table 18. Parser/Demuxer supported audio/video

| | Demuxer feature | ASF | AVI | MP4 | OGG | FLV | MPG2 | MKV | RMVB |
|-------|-----------------|-----|-----|-----|-----|-----|------|-----|------|
| Video | H264 | - | Y | Y | - | Y | Y | Y | - |
| | MPEG2 | - | Y | - | - | - | Y | Y | - |
| | MPEG4 | Y | Y | Y | - | - | - | Y | - |

7.4.4 Speech codec specification

Table 21. Speech codec specification

| | Feature | Sample rate | Bit rate (kbps) | H/W or S/W |
|--------------|---------|-------------|-----------------|------------|
| Speech codec | G.711 | 8 kHz | 64 | S/W |

Table continues on the next page...

Table 21. Speech codec specification (continued)

| | Feature | Sample rate | Bit rate (kbps) | H/W or S/W |
|--|---------|-------------|------------------------------------------------------------|------------|
| | G.723.1 | 8 kHz | 5.3, 6.3 | S/W |
| | G.726 | 8 kHz | 16, 24, 32, 40 | S/W |
| | G.729ab | 8 kHz | 8 | S/W |
| | AMR_NB | 8 kHz | 12.2, 10.2, 7.9, 7.4, 6.7, 5.9, 5.15, 4.75 | S/W |
| | AMR_WB | 16 kHz | 23.85, 23.05, 19.85, 18.25, 15.85, 14.25, 12.65, 8.85, 6.6 | S/W |

7.4.5 Streaming protocol specification

Table 22. Streaming protocol specification

| Protocol | Feature |
|------------|-------------------------------------------|
| HTTP/HTTPS | HTTP/HTTPS progressive streaming |
| RTSP | RTP, SDP |
| RTP/UDP | RTP/UDP MPEGTS streaming |
| HLS | HTTP live streaming |
| MPEG-DASH | MPEG Dynamic Adaptive Streaming over HTTP |

7.4.6 RTSP streaming server specification

To support the RTSP server, the `gst-rtsp-server` open source package needs to be installed. See Section “RTSP Streaming Server” in the *i.MX Linux® User's Guide* (IMXLUG) for information on how to build and install it.

Table 23. RTSP streaming server specification

| Demux feature | | AVI | MP4 | FLV | MKV | MP3 | AAC |
|---------------|-------|-----|-----|-----|-----|-----|-----|
| Video | H264 | Y | Y | Y | Y | - | - |
| | MPEG4 | Y | Y | - | Y | - | - |
| Audio | MP3 | Y | Y | Y | Y | Y | - |
| | AAC | Y | Y | Y | Y | - | Y |

7.4.7 Subtitle specification

Table 24. Subtitle specification

| Internal/External | Subtitle format |
|-------------------|-----------------|
| Internal | SRT, SSA, ASS |
| External | SRT |

7.4.8 Sound Open Firmware

Sound Open Firmware updated to v1.9 and contains following new features:

- Support for i.MX 8ULP platform
- Equalizer support based on IIR and FIR filters
- Dynamic Range Compress support

7.5 Known issues and limitations for multimedia

Issues seen on GStreamer 1.x:

- As the maximum buffer size of the playbin multiqueue is 10 MB, problems may be seen with some long audio or video interleaved streams. You can enlarge this buffer size to support these special use cases.
- AAC decoder: The ADIF format does not support seek mode nor FF/FB.
- Playing recorded AVI file on i.MX with VPU (MPEG4 (vpu) + AVI (avimux)) fails because the AVIMUX mark MPEG4 video to DIVX is not supported.
- Rotation on i.MX 6 with VPU is not supported for interlaced streams whose width or height is larger than 968 x 968 when enabled deinterlacing due to a driver limitation.
- Rewind may report an EOS when using libav for video decoding.
- Accurate seek mode may take a longer time delay.
- For clips with no index table in containers (or video with only very few key frames), seeking is not supported.
- Audio-only clips do not support FB.

8 Revision History

This table provides the revision history.

Table 25. Revision history

| Revision number | Date | Substantive changes |
|-----------------------------|---------|------------------------------------------------------|
| L4.9.51_imx8qxp-alpha | 11/2017 | Initial release |
| L4.9.51_imx8qm-beta1 | 12/2017 | Added i.MX 8QuadMax |
| L4.9.51_imx8mq-beta | 12/2017 | Added i.MX 8M Quad |
| L4.9.51_8qm-beta2/8qxp-beta | 02/2018 | Added i.MX 8QuadMax Beta2 and i.MX 8QuadXPlus Beta |
| L4.9.51_imx8mq-ga | 03/2018 | Added i.MX 8M Quad GA |
| L4.9.88_2.0.0-ga | 05/2018 | i.MX 7ULP and i.MX 8M Quad GA release |
| L4.9.88_2.1.0_8mm-alpha | 06/2018 | i.MX 8M Mini Alpha release |
| L4.9.88_2.2.0_8qxp-beta2 | 07/2018 | i.MX 8QuadXPlus Beta2 release |
| L4.9.123_2.3.0_8mm | 09/2018 | i.MX 8M Mini GA release |
| L4.14.62_1.0.0_beta | 11/2018 | i.MX 4.14 Kernel Upgrade, Yocto Project Sumo upgrade |
| L4.14.78_1.0.0_ga | 01/2019 | i.MX 6, i.MX 7, i.MX 8 family GA release |
| L4.14.98_2.0.0_ga | 04/2019 | i.MX 4.14 Kernel upgrade and board updates |
| L4.19.35_1.0.0 | 07/2019 | i.MX 4.19 Beta Kernel and Yocto Project Upgrades |
| L4.19.35_1.1.0 | 10/2019 | i.MX 4.19 Kernel and Yocto Project Upgrades |
| Linux LF5.4.3_1.0.0 | 03/2020 | i.MX 5.4 Kernel and Yocto Project Upgrades |

Table continues on the next page...

Table 25. Revision history (continued)

| Revision number | Date | Substantive changes |
|-----------------------|---------|-------------------------------------------------------------------------------------------------------|
| L5.4.3_2.0.0 | 04/2020 | i.MX 5.4 Alpha release for i.MX 8M Plus and 8DXL EVK boards |
| L5.4.24_2.1.0 | 06/2020 | i.MX 5.4 Beta release for i.MX 8M Plus, Alpha2 for 8DXL, and consolidated GA for released i.MX boards |
| L5.4.47_2.2.0 | 09/2020 | i.MX 5.4 Beta2 release for i.MX 8M Plus, Beta for 8DXL, and consolidated GA for released i.MX boards |
| L5.4.70_2.3.0 | 12/2020 | i.MX 5.4 consolidated GA for release i.MX boards including i.MX 8M Plus and i.MX 8DXL |
| L5.4.70_2.3.0 | 01/2021 | Updated the command lines in Section "Running the Arm Cortex-M4 image" |
| Linux LF5.10.9_1.0.0 | 03/2021 | Upgraded to Yocto Project Gatesgarth and the kernel upgraded to 5.10.9 |
| Linux LF5.10.35_2.0.0 | 06/2021 | Upgraded to Yocto Project Hardknott and the kernel upgraded to 5.10.35 |
| Linux LF5.10.52_2.1.0 | 09/2021 | Updated for i.MX 8ULP Alpha and the kernel upgraded to 5.10.52 |
| Linux LF5.10.52_2.1.0 | 10/2021 | Updated the Arm SR-IR certification |
| Linux LF5.10.52_2.1.0 | 11/2021 | Updated Table 3 "BSP and multimedia standard packages" |
| Linux LF5.10.72_2.2.0 | 12/2021 | Upgraded the kernel to 5.10.72 and updated the BSP |

Information in this document is provided solely to enable system and software implementers to use NXP products. There are no express or implied copyright licenses granted hereunder to design or fabricate any integrated circuits based on the information in this document. NXP reserves the right to make changes without further notice to any products herein.

NXP makes no warranty, representation, or guarantee regarding the suitability of its products for any particular purpose, nor does NXP assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters that may be provided in NXP data sheets and/or specifications can and do vary in different applications, and actual performance may vary over time. All operating parameters, including "typicals," must be validated for each customer application by customer's technical experts. NXP does not convey any license under its patent rights nor the rights of others. NXP sells products pursuant to standard terms and conditions of sale, which can be found at the following address: nxp.com/SalesTermsandConditions.

Right to make changes - NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Security — Customer understands that all NXP products may be subject to unidentified or documented vulnerabilities. Customer is responsible for the design and operation of its applications and products throughout their lifecycles to reduce the effect of these vulnerabilities on customer's applications and products. Customer's responsibility also extends to other open and/or proprietary technologies supported by NXP products for use in customer's applications. NXP accepts no liability for any vulnerability. Customer should regularly check security updates from NXP and follow up appropriately. Customer shall select products with security features that best meet rules, regulations, and standards of the intended application and make the ultimate design decisions regarding its products and is solely responsible for compliance with all legal, regulatory, and security related requirements concerning its products, regardless of any information or support that may be provided by NXP. NXP has a Product Security Incident Response Team (PSIRT) (reachable at PSIRT@nxp.com) that manages the investigation, reporting, and solution release to security vulnerabilities of NXP products.
